

Everything under control with Delta VOGT Hammer!

The new VOGT Hammer with Delta-handle combines all benefits of our T-handle and our conventional handle. Especially in civil engineering, where vertical and horizontal excavation works need to be done, it is well accepted as an all-rounder.

The aluminium-handle fits well in the hand because it's completely cast out of one piece and connected to the stick and hammer mechanism. Compact construction and weight distribution simplifies and speeds up working, e.g. with house connections. With the robust 18mm chisel holder, a hammer length of 70 cm and a weight of just 4,3 kg is the VOGT Hammer VH 50-70.18-DELTA easy to handle.

Further possible uses with the lighter VH 25 (from 3,15 kg) are in the large area of industrial application and joint refurbishment. The Delta-handle is available for all VOGT Hammer device types with or without vibration dampening. Standard lengths are 50,70 and 90 cm – further lengths available on request. Existing VOGT Hammer can be converted.

VOGT Hammer VH 25

Operating pressure	3.0 - 6.0 bar	Typ VH	VH 25-50 D	VH 25-70 D	VH 25-90 D
Percussion rate	3200 /min	Total length	52 cm	72 cm	92 cm
Air consumption	190 l/min	Weigh:	3.25 kg	3.60 kg	3.95 kg

VOGT Hammer VH 50.18

Operating pressure	3.0 - 6.0 bar	Typ VH	VH 50-50.18 D	VH 50-70.18 D	VH 50-90.18 D
Percussion rate	1960 /min	Total length	52 cm	72 cm	92 cm
Air consumption	255 l/min	Weigh:	3.85 kg	4.25 kg	4.55 kg
